DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 5-12 and 14-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Klaue.

Re: claims 1, 5-11, Klaue shows a range shift display unit, as in the present invention, comprising: a shift rod 43, an ECU 61 to receive signals from the shifting positions and to send signals to a display 49, 49a; wherein the display is made to blink until the shift position has reached the target range, see column 5 line 59 to column 6, line 8.

Re: claims 12 and 14-18, Klaue shows a range shift display method, as in the present invention, comprising: detecting a target range ... a predetermined target range, wherein the display is made to blink until the shift position has reached the shift position for the target range, see column 5, line 59 to column 6, line 8.

Response to Arguments

3. Applicant's arguments filed 9/25/03 have been fully considered but they are not persuasive. Applicant argues that Klaue fails to show the display unit wherein the

Art Unit: 3683

display processing means drives the display portion corresponding to the target range by a first driving method until the shift means reaches the shift position for the target range then drives the display portion by a second driving method. The Examiner is at a lost of what are the first and second driving methods the Applicant is referring to. It is understood that the display unit of the instant invention would blink (Is this the first method?) until the shift position has reached the shift position for the target range as illustrated in figure 4; then the display would light up (Is this the second method?) when the target is reached. It is believed that Klaue's display unit is performing the same as shown in column 8, lines 26-29, where it states " The shift operation is completed and the digital display, blinking up to this point, displays now permanently the number of the newly engaged gear." The rejection is still deemed proper and is repeated above.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
